DOCKET NO.: MSFT-3515 (138320.02)

Application No.: 10/785,328

Office Action Dated: April 26, 2005

This listing of claims will replace all prior versions, and listings, of claims in the application.

PATENT

Listing of Claims:

1 - 32. (canceled)

33. (previously presented) A system for validating multiple alternative execution

plans for a single database query, comprising:

a search engine responsive to the query for constructing a data structure containing a

plurality of groups each including a number of alternative operators, at least some of the

operators having pointers to one or more different ones of the groups;

a ranking module for ranking the operators in the groups and for unranking them so as

to construct a plurality of different execution plans for the query, wherein each execution

plan is assigned a unique global rank, based on operator rank data, that identifies one

respective execution plan from all other possible execution plans; and

a validation module for validating the execution plans from the ranking module.

34. (original) The system of claim 33 where the data structure is a table.

35. (original) The system of claim 33 further including a specification for

specifying a number of different plans to be constructed.

36. (original) The system of claim 33 further including a directory containing

locations of the groups and operators within the data structure containing the groups.

37. (canceled)
